TECH SOLUTIONS

Business Directory Platform

A complete and robust solution that revolutionizes business directory management. It integrates advanced artificial intelligence, sophisticated booking systems, multi-vendor compatibility, and powerful monetization tools into an intuitive and scalable platform.

Artificial Intelligence That Transforms Search

AI Chat with Integrated ChatGPT

The ChatGPT integration delivers advanced semantic understanding with real-time database search. Visitors interact naturally with your directory through intelligent conversations that understand context and intent. The AI combines natural language processing with instant database queries to deliver the most relevant results, making the directory easier to use and significantly increasing visitor engagement.

Natural Semantic Search

AI Search allows users to search using common phrases instead of just specific keywords, transforming the traditional search experience into a natural and efficient conversation.

Advanced Booking Systems for Every Need

QR Code Verification

Comprehensive booking management system with secure verification via QR codes. Owners authenticate entries from their smartphones, instantly confirming validity through the control panel. Tracks cash payment status with consistent security.

Flexible Day-Based Calendar

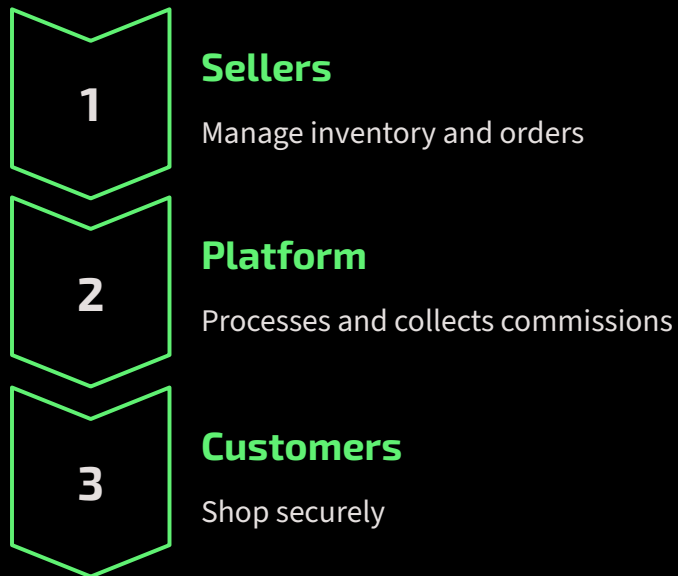

Ideal for vacation rentals, vehicles, and equipment. Supports multiple guest types with add-on services. Set custom pricing rules for regular days and weekends, automatically preventing duplicate bookings.

Hourly Time Slots

Designed for service businesses such as doctors, barbers, and tutors. Clients view real-time availability while providers control intervals. ZOOM integration for scheduled online meetings.

Complete Multi-Vendor Marketplace

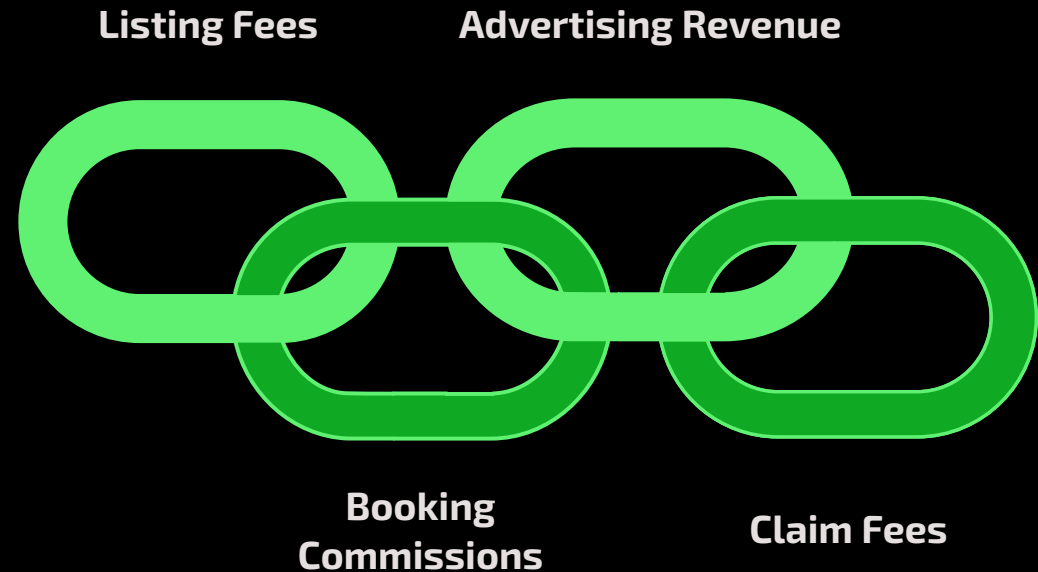

Users create branded storefronts with custom product listings. Sellers showcase their products on optimized pages with integrated advertising widgets. The system enables commission generation on every sale through flat-rate or percentage-based models.

Diversified Monetization Strategies

Generate Multiple Revenue Streams

Implement diverse monetization strategies that maximize your platform's revenue potential. The advertising campaign system allows users to acquire featured placements on the homepage, top search results, or sidebar with custom budgets and category-based targeting.

1 Listing Submission Commissions

2 Booking Commissions

3 Premium Paid Advertising

4 Listing Claims

Robust Payment Infrastructure

Automated Split Payments

Process secure transactions with access to hundreds of global payment gateways through WooCommerce integration. The split payment feature automatically divides booking payments between providers and administrators, completely eliminating manual payments.

Stripe integration enables automatic commission splitting while maintaining the highest enterprise security standards. Providers monitor their earnings, review their payment history, and configure payment methods through a dedicated Wallet page featuring transparent financial summaries and detailed analytics.

Flexible Package and Claim System

1 Custom Packages

Create tiers that unlock specific features. Restrict premium capabilities such as bookings, reviews, or video to paid plans.

2 Listing Claims

Owners claim and manage their listings through streamlined verification. Integrates with the package system.

3 Granular Control

Manage gallery limits and featured placements across free, basic, and professional tiers with simple upgrade options.

User Dashboard and Customization Tools

Complete Front-End Dashboard

An intuitive dashboard that centralizes all management tools in one place. Users manage listings, bookings, packages, profiles, messages, coupons, statistics, advertising campaigns, and store settings from a unified interface.

The overview displays key metrics such as pending bookings, important notifications, wallet balance, and recent reviews. All designed to maximize operational efficiency.

Custom Fields Kit

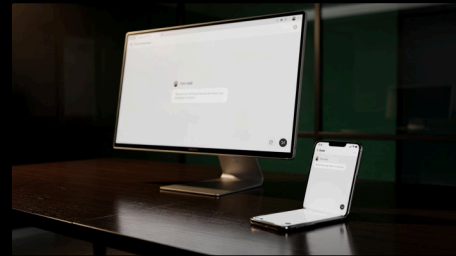

Customize your directory without coding using a drag-and-drop interface. Create unique forms, configure search filters, and design category-specific fields with intelligent conditional logic.

Advanced Technology and Communications

Maps Without Google API

OpenStreetMap and MapBox offer cost-effective alternatives. Integrated address autocomplete eliminates API costs while maintaining full accuracy.

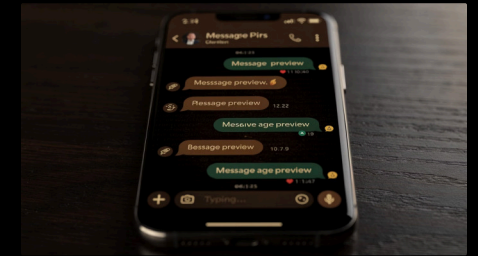

Automated Notifications

Twilio integration for instant SMS and email alerts on bookings, payments, and expirations. Unique code verification reduces spam.

iCal Synchronization

Two-way synchronization prevents duplicate bookings. Reservations automatically update availability on Booking.com and Airbnb.

Private Messaging

Direct real-time communication between users and owners without revealing personal contact information.

Global Optimization and Superior Performance

20+ Languages

Ready-to-install translations available from
